und Raumfahrt

A digital-sovereign platform, co-developed with the data privacy authority **honic**[®] & large patient organizations, used by universities & life science industry

Realtime access to health data from currently 12M, soon 40M Germans across all healthcare silos for medical research and AI validation

First research on Honic data & platform, together with LMU, now published at Nature Communication

Abstract

Vitamin D is critical for bone health and immune function, but the COVID-19 pandemic, characterized by lockdowns and reduced outdoor activity, raised concerns about potential declines in vitamin D levels due to dietary changes and limited sunlight exposure. In this study, we analyzed routinely-collected laboratory data ($N = 292,187$ patients) from a large laboratory chain in Bavaria, Germany, to assess changes in vitamin D levels before (March 2018 to February 2020) and during (March 2020 to February 2022) the pandemic. Different

RWD statistics in an interactive dashboard with near-time updates, e.g. from laboratories

ICD-10 Code Diagnosis
Select relevant diagnoses

Timeframe
Select years to compare

Referring Practitioner
Overview of healthcare providers in specialized sectors who have made referrals

Key Metrics
Number of patients & proportion of tested patients

Regional Breakdown
Data segmented by different geographic areas

Test Count
Number of new tests on a weekly basis

Demographics
Overview of key population characteristics such as gender and age

Test Coverage
Proportion of test takers over a defined period

Insurance
Distribution (%) and type of insurance

Value Distribution
Test results split by outcome / value buckets

Let's build an interoperable European Health Data Space!
