

Data Spaces Symposium

Accelerating adoption. Increasing impact.

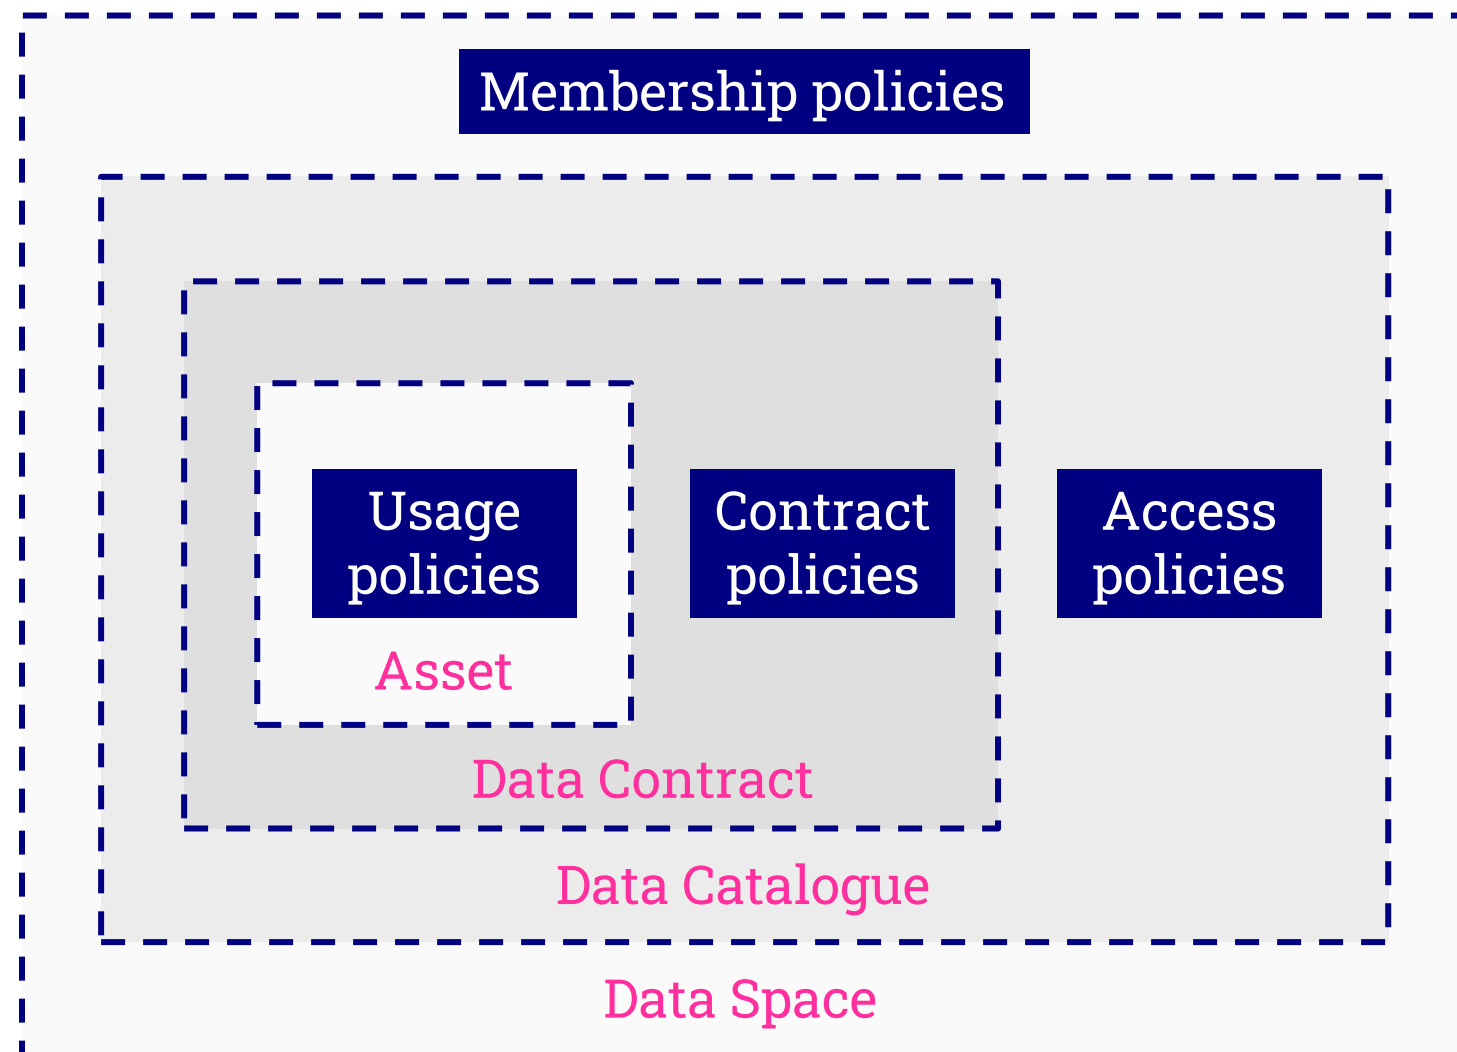

Towards the Future!

Data Spaces as a global fabric to
enable autonomous AI Agents

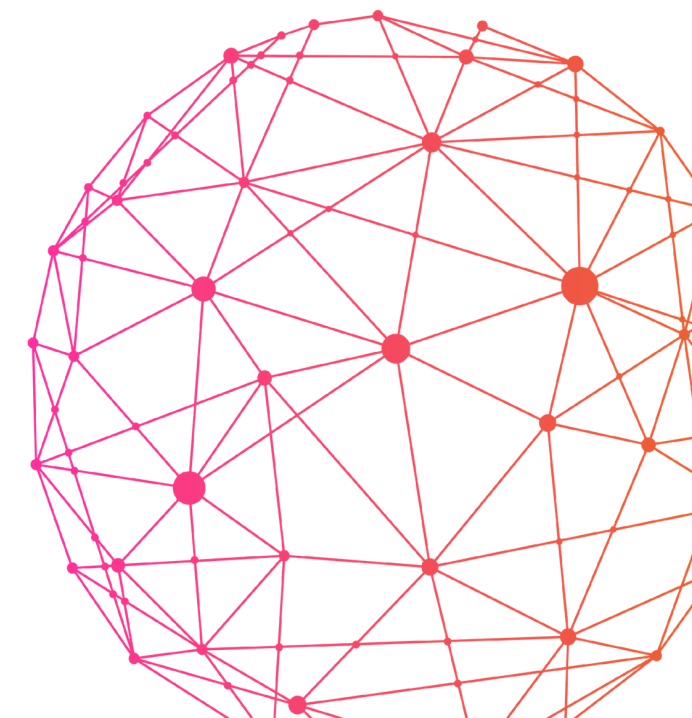

Data Spaces Symposium

AI & Dataspace Protocol

EXAMPLE of POLICY LAYERS

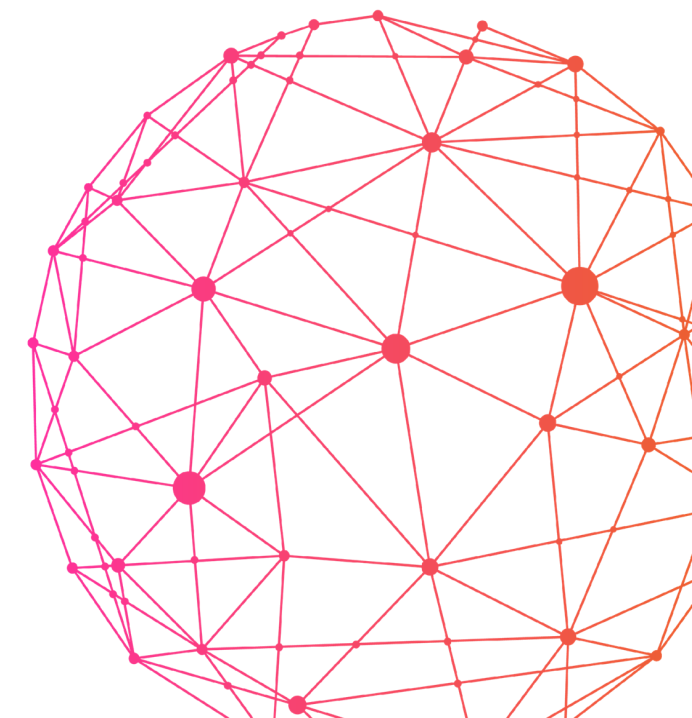

- **Membership policy:**
Members of “Energy Dataspace”
 - European energy companies with valid eIDAS identity
- **Access policy:**
Only verified suppliers of my company
- **Contract policy:**
Restricted storage locations
 - Data delivery to a target landing zone
 - Required sovereignty controls A,B,C
- **Usage policy:**
Prohibited:
 - LLM training
 - Healthcare-related queriesPermitted:
 - Prompt engineering
 - Factual grounding

Data Spaces Symposium

AI & Dataspaces – Today

- **Dataspaces are all about negotiating data sharing contracts**
 - ... for AI-Training Data
 - ... for Retrieval Augmented Generation (RAG)
 - ... for accessing data services
- **Dataspace Connectors are Software Agents**
 - ... MCP servers can be Data Planes in Dataspaces

AGENTIC AI EXECUTES BUSINESS IDEAS

Create a business
that produces...

Data Spaces Symposium

AI & Dataspaces – The Future

- **Dataspace Technology is the foundation for Trust Negotiation**
- **Dataspaces are the Trust Context to execute Actions**
- **Dataspaces are all about negotiating trust**
 - ... for accessing resources – not just data!
 - ... for physical resources that have digital representations
- **Dataspace Connectors are Software Agents - so are AI Agents!**
 - ... AI Agents can be the Data Plane in a Dataspace Connector
 - ... AI Agents can use Dataspace Connectors as a skill
 - ... Dataspace Protocol can be implemented as an AI Agent

The Future: Data Spaces enable a global trust fabric which enables autonomous AI Agents
